Why eFront instead of Moodle?

User friendly | Fast | Attractive

eFront has been designed to minimize the clicks to go from one point of the interface to another. The sidebar helps as a central navigation or search point throughout the system. The use of AJAX technology minimizes the need to transfer data between the server and the client improving the system response time and the users' experience. A main difference between eFront and Moodle is that eFront has been built from scratch to attract and retain the users. Its interface is well structured, with vivid icons and colors and with a minimum amount of popups. In all aspects eFront is more web 2.0 than Moodle and more suited for a new wave of learners.

Scorm Certified

eFront is certified for its compliance with SCORM standard. Moodle is SCORM compatible but not certified from the ADL organization. SCORM is the current standard for the creation and deployment of interactive web-based learning courses.

Enterprise ready

eFront comes with an enterprise dedicated edition that offers supports for job descriptions, skills management, branches, detailed employees log, reports for the best candidates for certain jobs, career management etc. On the other side Moodle is mainly educational oriented.

Native support for advanced features like payments | skill-gap analysis | social extensions

eFront offers native support for advanced features that can be found only on very expensive learning management systems. These include support for payments or subscriptions through paypal integration and skill-gap analysis. Moreover, eFront offers several social extensions to facilitate the community feeling inside the system. These extensions include lesson/system timelines, user profiles, integration with facebook (through facebook connect) etc

Quality

eFront has been built from a dedicated team of professional programmers. Its code is object oriented, well structured and well commented. Unlike eFront, Moodle has a big range of contributors. We view the quality as a two part equation. The improvement of the core system should be done through a small, coherent, dedicated team of programmers. On the other side modules and testing should be done from as many users as possible.

Professional Support

eFront comes with professional support and customization services to help you be more productive on a production environment.

Parity points

Like Moodle, eFront comes with a complete set of features to create content, tests, assessments, track progress, issue certifications and dozens of add-ons to support wikis, blogs, youtube videos, picture lists, F.A.Qs, external links etc. It has also been tested and improved from a wide community of users throughout the world that is very active and helpful.

In all aspects, eFront is a mature system that has been built to offer a rich learning experience, to be better than open-source systems and at the same time more effective than other professional learning solutions.
